

Milton Keynes manufacturing company providing PPE to the NHS.

PPS is a leading UK manufacturer of decontamination equipment and personal protective equipment. We specialise in providing complete solution packages to a wide variety of hazard-prone industries.

For immediate release - Tuesday, 26th May

Milton Keynes based manufacturing company PPS has been providing Personal Protective Equipment to the NHS in the form of made-to-measure examination curtains and medical gowns.

Our made-to-measure examination curtains have been warmly received by doctors and nurses who are now able to freely examine patients without the risk of being infected with Covid-19.

The curtains are being used in several doctors surgeries across Milton Keynes and Bletchley.

Our medical gowns have also been gratefully received at Milton Keynes University Hospital, doctors surgeries and care homes - giving key workers the ability to stay protected whilst doing vital work.

Crucially, our gowns are washable, withstanding heats of up to 95°C - meaning they have an infinite number of uses.

Our PPE is now also being used by undertakers in Birmingham and the West Midlands allowing them to remain safe whilst working.

We're also proud to have provided PPE to the Christos Essential Services Clinic in Newport Pagnell - giving them the ability to continue their great work with cancer patients.

It's not just the NHS and medical profession who benefits from our PPE.

As lockdown restrictions are eased and offices and schools begin to re-open maintaining social distancing is crucial.

It is with that in mind that we have designed our new social distancing dividers.

Already in use at our factory, the dividers allow for work to continue in a safe environment - without obstructing views.

This allows for socially distant yet sociable working conditions.

We're working with schools in Milton Keynes to implement the dividers safely for when students return to lessons.

Our PPE remains in high demand worldwide.

Over the last few weeks, we have also provided equipment to Australia, Greece, Iceland, Italy, Kenya, Portugal and the U.S.A.
